PLATE I BOOK EXPLORATION 80/220

Vsevolodskiy mekhanizatsionnyy Institut geofizicheskikh metodov razvedki
Bazhenko, V.P. (Ed.) Geofizika, 20 (Exploration and Industrial
Geophysics, No. 20) Moscow, Gostekhnizdat, 1979. 67 p. (Series: Chislo
proizvodstvennykh opytov) 4,000 copies printed.

Ed.: M.F. Rikhtor, Ed.: Ye.O. Perelman; Tech. Ed.: A.B. Polubina.

PURPOSE: This booklet is intended for exploration geophysicists and geologists.
CONTENTS: This collection of articles includes discussions of improvements in
seismic exploration techniques and interpretation of data obtained by the
refracted and reflected wave method of seismic sounding. Individual
articles discuss: the construction of geophysical logs; the use of
industrial borehole equipment; the standardization of geophysical logs;
logging equipment; and methods for computing labor productivity in geophysical
operations. A diagram to facilitate the interpretation of data and conditions
when using gamma logging of boreholes is described. References accompany
each article.

(Oil well logging, Radiation)

ZAPOROZHETS, V.M.; SULIN, V.V.

First results of the use of a well neutron generator in radioactive logging. Prikl. geofiz. no.28:116-129 '60. (MIRA 14:3)
(Oil well logging, Radiation)

SOZIN, V V

PHASE I BOOK EXPLOITATION SOV/5592

Vsesoyuznoye soveshchaniye po vnedreniyu radioaktivnykh izotopov i yadernykh izlucheniya v narodnom khozyaystve SSSR. Riga, 1960.

Radioaktivnyye izotopy i yadernyye izlucheniya v narodnom khozyaystve SSSR; trudy Vsesoyuznogo soveshchaniya 12 - 16 aprelya 1960 g. g. Riga, v 4 tomakh. t. 4: Poiaki, razvedka i razrabotka poleznykh iskopayemykh (Radioactive Isotopes and Nuclear Radiation in the National Economy of the USSR; Transactions on the Symposium Held in Riga, April 12 - 16, 1960, in 4 volumes. v. 4: Prospecting, Surveying, and Mining of Mineral Deposits) Moscow, Gostoptekhizdat, 1961. 284 p. 3,640 copies printed.

Sponsoring Agency: Gosudarstvennyy nauchno-tekhnicheskyy komitet Soveta Ministrov SSSR. Gosudarstvennyy komitet Soveta Ministrov SSSR po ispol'zovaniyu atomnoy energii

Eds. (Title page): N. A. Petrov, L. I. Petrenko, and P. S. Savitskiy; ed. of this volume: N. A. Speranskiy; Scientific ed.: M. A. Speranskiy; Executive Eds.: N. N. Kuz'mina and A. G. Ionel';

Card 1/11

Radioactive Isotopes and Nuclear (Cont.)

SOV/5592

Tech. Ed.: A. S. Polosina.

PURPOSE : The book is intended for engineers and technicians dealing with the problems involved in the application of radioactive isotopes and nuclear radiation.

COVERAGE: This collection of 39 articles is Vol. 4 of the Transactions of the All-Union Conference of the Introduction of Radioactive Isotopes and Nuclear Reactions in the National Economy of the USSR. The Conference was called by the Gosudarstvennyy nauchno-tekhnicheskii komitet Sovet Ministrov SSSR (State Scientific-Technical Committee of the Council of Ministers of the USSR), Academy of Sciences USSR, Gosplan SSSR (State Planning Committee of the Council of Ministers of the USSR), Gosudarstvennyy komitet Soveta Ministrov SSSR po avtomatizatsii i mashinostroyeniyu (State Committee of the Council of Ministers of the USSR for Automation and Machine Building), and the Council of Ministers of the Latvian SSR. The reports summarized in this publication deal with the advantages, prospects, and

Card 2/11

Radioactive Isotopes and Nuclear (Cont.)

SOV/5592

development of radioactive methods used in prospecting, surveying, and mining of ores. Individual reports present the results of the latest scientific research on the development and improvement of the theory, methodology, and technology of radiometric investigations. Application of radioactive methods in the field of engineering geology, hydrology, and the control of ore enrichment processes is analyzed. No personalities are mentioned. There are no references.

AUTHORS: Zaporozhets, V. M. and Sulin, V. V. S/29/63/000002/126/127
D263/D307

TITLE: Possibility of the application of particle accelerators in petroleum and ore geophysics

PERIODICAL: Referativnyy zhurnal, Geofizika, no. 2, 1963, 39, abstract 2D230 (In collection: Elektron. uskeriteli, Tomsk. Tomskiy un-t, 1961, 319-327)

TEXT: The authors discuss the shortcomings and limitations of the existing methods of radioactive logging and the regions of possible application of neutron generators with impulse and stationary radiation, and γ -generators, and also possibilities of the application of portable laboratory radiation generators. A description is given of a depth instrument for the radioactive logging with a continuous action neutron generator СРН-1 (SGN-1). The generator is fitted with a two-channel radiometer with scintillating counters, and is contained in a casing 102 mm in diameter and 4230 mm long. The instrument is filled with compressed nitrogen or carbon

AUTHOR: Anan'yev, L. M., Sulin, V. V., Chakhlov, V. L.

TITLE: Design of small-size induction accelerator for investigation of
bore-holes

PERIODICAL: Referativnyy zhurnal, Fizika, no. 1, 1963, 40, abstract 1A378
(In collection: "Elektron. uskoriteli". Tomsk, Tomskiy un-t,
1961, 328 - 334)

TEXT: Requirements are formulated for a betatron intended to investigate
bore-holes by the method of logging. A brief description is given of the 6.5
MeV betatron construction, designed for these purposes in the Tomsk Polytechnic
Institute. The electromagnet of the accelerator together with the sealed off
vacuum chamber is placed within an experimental device having an external diameter
of 200 mm and a length of 830 mm.

V. Kanunnikov

TITLE: Use of the gamma-activation method to study rock specimens

SOURCE: Yadernaya geofizika. Vy*pusk 1963 g. Moscow, 1963, 167-187

TOPIC TAGS: geochemistry, radiometry, Gamma radiometry, mineral investigation, mineral analysis, Gamma ray mineral analysis

ABSTRACT: Some results are reported obtained in the development of a method for γ -activation analysis of rock samples, carried out at the Vsesoyuzny'y nauchno-issledovatel'skiy institut Yadernoy geofiziki i geokhimii (All-Union Scientific Research Institute of Nuclear Geophysics and Geochemistry) of the Ministry of Geology and Mineral Conservation SSSR. The advantages of the use of γ quanta over neutrons are discussed, major among them being the fact that the thermal neutrons simultaneously activate many elements in the medium and the activation products become difficult to separate. An extensive list is prepared of the main parameters of (γ , n) reactions on nuclei of different isotopes of elements contained in rocks,

Card 1/3

ACCESSION NR: AT4001513

along with the characteristics of their radioactive decay products. It is concluded that rocks and the useful minerals contained in them differ in the photoneutron properties and this difference varies with the energy of the γ radiation incident on the rock. Most elements contained in the rocks are activated by high-energy γ radiation. The threshold of the γ -ray energy at which activation begins and the half life, character, and energy of the activation products differ for different nuclei. A procedure based on these differences is developed for γ activation analysis of samples of rocks and ores. It is emphasized that the method can be particularly useful in the investigation of rocks with complicated composition, since selective activation of the individual elements or groups of such elements, produced by varying the energy of the activating γ radiation, will facilitate the analysis. It is urged that small γ -quantum generators be rapidly developed for practical realization of promising photonuclear methods for the investigation of minerals and ores under field conditions and under well conditions. "These results were obtained during the course of work per-

TITLE: Some Questions of the General Theory of Radicals (Nekotoryye voprosy obshchey teorii radikalov)

PERIODICAL: Matematicheskii Sbornik, 1958, Vol 44, Nr 2, pp 273-286 (USSR)

ABSTRACT: The paper written under guidance of A.G. Kurosh is a certain complement to the well-known publication of Kurosh [Ref 5] concerning radicals of rings and algebras. An incomplete survey on the radicals in the class of all associative algebras of finite rank over a certain field Φ is given. A necessary condition for the regularity of the radical in the class of all nonassociative algebras is formulated. The property of hereditariness of a radical (a P-radical ring is hereditary, if all its ideals are P-ideals) is investigated in detail. It is shown that not all radicals possess this property. The existence of some other special radicals or pairs of radicals is proved by examples. On the whole the author proves 12 theorems and some lemmata; a whole paragraph of the paper is devoted to a summary of [Ref 5]. There are 6 references, 1 of which is Soviet, and 5 American.

AUTHOR: Sulista, Milan (Mathematician)

TITLE: A contribution to the realization of passive two-pole networks

SOURCE: Slaboproudy obzor, v. 25, no. 3, 1964, 135-138

TOPIC TAGS: foster preamble, Cauer form, two-pole network

ABSTRACT: The first part -- known in literature as Foster's preamble of most methods known for the realization of linear passive two-pole networks from a given impedance, consists in the removal of the j -axis poles and the zero points (the so-called critical points). Until now, this method necessitated the determination of all the critical points, i.e., the general solution of algebraic equations of higher degrees and the calculation of the residuals. A simple algebraic device (the expansion of the rational function into a finite chain fraction, the division of the polynomials and solution of a system of linear algebraic equations) eliminates this necessity. This device and the alogarithmic nature of all the calculations make it possible to solve the entire

Card 1/2

ACCESSION NR: AP4017187

problem with the use of automatic digital computers. The problem remains whether the impedance of RC or RL two-pole networks can be determined from a given rational positive function by means of an analogous method (i. e., without solving algebraic equations of higher degrees). Orig. art. has: 4 figures and 16 formulas.

PURPOSE: This survey is intended for specialists working in the field of semiconductor pulse devices and digital computers. It may also be used by students taking advanced courses in related fields at schools of higher technical education.

COVERAGE: The survey deals with problems of design and calculation of various semiconductor logical switching circuits and assemblies used in digital computers. Characteristic features of semiconductor switching devices are described, and basic circuit diagrams applied in semiconductor logical systems are analyzed. The basic sources of this survey are 5 English books and 5 articles in periodicals, published in the USA, and the Proceedings of a

TITLE: Radicals in factor semigroups

SOURCE: Matematicko-fyzikalny casopis, no. 4, 1964, 297-300

TOPIC TAGS: group theory, factor analysis

Abstract (Author's English summary, modified): Let S be a semigroup and J a two-sided ideal in S . Let \bar{S} be a factor semigroup on S , \bar{J} a factor semigroup on J and $\bar{J} \subseteq \bar{S}$. The set of all nilpotent elements of the factor semigroup \bar{S} with respect to the ideal \bar{J} will be denoted by $N(\bar{S}, \bar{J})$; the Clifford radical of the factor semigroup \bar{S} with respect to the ideal \bar{J} will be denoted by $R^*(\bar{S}, \bar{J})$; the Schwarz radical of the factor semigroup \bar{S} with respect to the ideal \bar{J} will be denoted by $R(\bar{S}, \bar{J})$.

If \bar{S}_1 and \bar{S}_2 are two factor semigroups on (or in) S , we can form a new factor semigroup $\bar{S}_1 \cap \bar{S}_2$ on (or in) S , every class of which is a non-empty intersection of a class of \bar{S}_1 and a class of \bar{S}_2 .

Card 1/2

L 60287-55

ACCESSION NR: AP5021201

Let \bar{S}_1 and \bar{S}_2 be factor semigroups on S , \bar{J}_1 to an ideal in \bar{S}_1 and \bar{J}_2 an ideal in \bar{S}_2 . Then we have

$$\begin{aligned} 1) M(\bar{S}_1, \bar{J}_1) \cap M(\bar{S}_2, \bar{J}_2) &= M(\bar{S}_1 \cap \bar{S}_2, \bar{J}_1 \cap \bar{J}_2); \\ 2) R^*(\bar{S}_1, \bar{J}_1) \cap R^*(\bar{S}_2, \bar{J}_2) &= R^*(\bar{S}_1 \cap \bar{S}_2, \bar{J}_1 \cap \bar{J}_2); \\ 3) R(\bar{S}_1, \bar{J}_1) \cap R(\bar{S}_2, \bar{J}_2) &= R(\bar{S}_1 \cap \bar{S}_2, \bar{J}_1 \cap \bar{J}_2). \end{aligned}$$

Orig. art. has 6 formulas.

TITLE: Radicals and topology in semigroups

SOURCE: Matematicko-fyzikalny casopis, no. 1, 1965, 3-14

TOPIC TAGS: topology, group theory, set theory

ABSTRACT: [Author's English summary, modified]: Let S be a semi-group and M a nonvoid subset in S . The set of all elements $x \in S$ for which there exists a positive integer $n(x)$, so that $x^{n(x)} \in M$, will be denoted by $\bar{N}(M)$. The intersection of all completely prime ideals which contain M will be denoted by $C(M)$. The mappings $M \rightarrow \bar{N}(M)$ and $M \rightarrow C(M)$ are closure operators and a topology is associated with each of them. The algebraic characterizations of closed and open sets and of the complete systems of neighborhoods of these topologies are given. For the first of these topologies the following statements are equivalent: a) it

Card 1/2

L 3013-66

ACCESSION NR: AP5026941

3
is a T_1 -topology; b) it is a T_2 -topology; c) it is the discrete topology; d) every element of the semigroup S is idempotent. The first of these topologies is a T_0 -topology if and only if the semigroup S does not contain cyclic subgroups of higher order than 2. The second of these topologies is a T_1 -topology if and only if the semigroup S has only one element. The second of these topologies is a T_0 -topology if and only if the semigroup S is a commutative semigroup of idempotent elements. The multiplication in the semigroup S in the first of these topologies need not be continuous, but in the second topology it always is continuous. These topologies are equivalent if and only if S has only one element. Orig. art. has: 21 formulas.

TITLE: Numerical solution of parabolic equations (Presented by Sh. Ye. Mikaladze, Academician, 1 November 1963)

SOURCE: AN GruzSSR. Soobshcheniya, v. 33, no. 3, 1964, 513-520

TOPIC TAGS: parabolic equation, cylindrical region, Fourier method, separation of variables, convergent series

ABSTRACT: The author studies the differential equation

$$\frac{\partial U}{\partial t} = L(\Delta) U, \quad (1)$$

where

$$\Delta \equiv \frac{\partial^2}{\partial x_1^2} + \dots + \frac{\partial^2}{\partial x_n^2}, \quad (2)$$

$$L(\Delta) \equiv \sum_{k=0}^m a_k \Delta^k (k \geq 1, a_k = \text{const.}, a_m \neq 0, \Delta^0 = \Delta(\Delta^{-1}), \Delta^0 = 1). \quad (3)$$

Card 1/1

ACCESSION NR: AP4031759

In the cylindrical region

$$D = G \times (0 < t \leq T], \quad G(0 < x_s < 1,$$

$s = 1, \dots, p)$ of the space x_1, \dots, x_p , he seeks a solution of (1) satisfying the boundary conditions

$$(U, \Delta U, \dots, \Delta^{m-1} U)_S = (0, 0, \dots, 0) \quad (4)$$

and the initial conditions

$$U(x_1, \dots, x_p, 0) = \varphi(x_1, \dots, x_p), \quad (5)$$

where S is the lateral surface of D and $\varphi(x_1, \dots, x_p)$ is a continuous function, in the region G , which satisfies (4) on the boundary, Γ , of this region. The author assumes that

$$L(\chi) \leq 0 \quad (6)$$

for any χ with $-\infty < \chi \leq 0$ for the scalar polynomial

$$L(\chi) \equiv \sum_{k=0}^m a_k \chi^k.$$

Card 2/4

ACCESSION NR: APL031759

He derives

$$Au^{(n+1)} = Bu^{(n)}, u^{(n)} = \varphi \left(n = 0, 1, \dots, \frac{T}{I} - 1 \right), \quad (7)$$

where

$$A = E - \theta IL(H), \quad (8)$$

$$B = E + (1 - \theta) IL(H), \quad (9)$$

E is the identity matrix, H is an $(h^{-1}-1)P$ -dimensional symmetric matrix corresponding to the network analog of the Dirichlet problem for the Poisson equation

$$\Delta U = f(x_1, \dots, x_p), U|_{\Gamma} = 0;$$

u^n is a $(h^{-1}-1)P$ -dimensional vector whose components serve as values of the function $u(x_1, \dots, x_p, t)$ at certain lattice points S_n . The author proves various theorems concerning solvability and stability of (7) and the relation of the solution of (7) to the original problem. Orig. art. has: 19 formulas.

Doctor of Technical Sciences, Professor; Ed. of Publishing
House: D.M. Ioffe; Tech. Ed.: I.P. Kuz'min.

COVERAGE: The conference was organized on the initiative of
the Institute of Automation and Telemechanics of the Academy
of Sciences, USSR, and the Moscow Power Engineering Insti-
tute and had as its aim the planning of the most progressive
ways of developing automatic control of electric drives. The
first conference on the subject of automated electric drive
took place more than ten years before the present one and
was concerned with d-c electric drives. The results of re-
search and development in the field of electric drives in the
building postwar Soviet industry and intensifying industrial
development. Present technical development of Soviet industry
demands high speeds, simplicity of construction, reliability
of operation, and economy. The electric drive is one of the
with frequency control appears to be the most promising type
of controlled a-c drive for wide application of this drive
in the Soviet economy. There is a need of developing new types
of frequency converters. Some interesting studies were made
in this connection at the Institute of Automation and Tele-
mechanics of the USSR Academy of Sciences and its Leningrad
branch, at the Moscow Power Engineering Institute, the Central
Design Bureau of the "Elektroprivod Plant, the Sverdlovsk
Institute of the Ministry of Construction of the USSR, and
in other design organizations. These studies contain material
at the present conference. The transactions contain material
concerning the theory and design of reactor, pulse, and
frequency methods of controlling a-c electric drives.
Candidate of Technical Sciences I.V. Chilikin of this collection
Kosareva participated in the preparation of this collection
of papers. The volume was reviewed by Professor Ya. V. Mitusov,
Doctor of Technical Sciences. Some of the papers include a
bibliography.

TABLE OF CONTENTS:

Transactions of the Conference (Cont.)	307/433
Sul'danishvili, I.M., Engineer. Dynamoelectric Systems of Frequency Control of Squirrel-cage Induction Motors	110
The system presented in the paper consists of serial electric machines manufactured in the USSR in contrast to conventional systems. The experimental special a-c commutator machines were tested at the labo- ratory of drilling drives of the VNIIMVNERI. Installation was assembled and tested at the labo- ratory of drilling drives of the VNIIMVNERI. Oscillograms and characteristics under various operating conditions were obtained. The set was compared with a conventional d-c motor-generator set, and indices of efficiency per unit weight as well as indices of efficiency per unit weight as concluded that his system should find application wherever a d-c power supply is unobtainable. There are 4 Soviet references.

TITLE: On Some Test Stand Results with the Diesel-Electric AC Drive DEB-2 (O nekotorykh rezul'tatakh stendovykh ispytaniy dizel'-elektricheskogo privoda peremennogo toka DEB-2)

PERIODICAL: Energeticheskii byulleten', 1958, Nr 2, pp 1-5 (USSR)

ABSTRACT: The author describes some test stand results with the diesel-electric drive DEB-2 obtained at the experimental drilling rig of the Giproftevmash. Diesels used were of 2-300 type. (The new equipment has already been dispatched for industrial operational tests). The experiments were aimed at: 1) testing the equipment; 2) testing the quality of load distribution between diesel-generators; 3) testing the start of an asynchronous motor driven by a diesel-generator, whose rated diesel-power was considerably lower than the capacity needed by the electromotor at the start. The author describes how the asynchronous motor is started even though it is driven by a diesel-generator whose capacity is insufficient for the purpose. The gap in power is compensated by the kinetic energy supplied by the diesel-generator flywheel mass. The author gives a formula for the approximate determination of the flywheel moment. Giving the mechanical

characteristics of the new system, he particularly stresses the lack of pushes and shocks as opposed to the phenomena observed at contactor-start of electric motors. The life-time of the diesel is also lengthened. There are 3 graphs, 1 circuit diagram and 1 oscillogram.

AUTHOR: Sul'khanishvili, I.N. 90-58-5-4/9

TITLE: On D.I. Mar'yanovskiy's Article "The Electric Braking of Drilling Winches" (O stat'ye D.I. Mar'yanovskogo "Elektricheskoye tormozheniye burovykh lebedok")

PERIODICALS: Energeticheskii byulleten', 1956, Nr 3, pp 11-14 (USSR)

ABSTRACT: The author deals with some points made by Mar'yanovskiy in his article which he feels are open to question. He points out that as the tackle rope from the winch unreels, the drum diameter of the winch must decrease by the amount of paid-out rope. The force on the running end of the rope should therefore be increased proportionally to the decrease in the drum diameter in order to keep the stretching moment constant. In constructing graphs of the "velocity function moment", Mar'yanovskiy's proposed method can be used for a preliminary estimate, but more exact results are obtained from an oscillogram of the lowering of the drilling instrument and a record of the speed of rotation of the winch drum. Formulae are given for determining the acceleration of the drum at varying stages of the process. The author stresses the need for automatic braking to relieve the operator from the considerable strain of manual

Card 1/2

90-58-3-4/9

On D.I. Mar'yanovskiy's Article "The Electric Braking of Drilling Winches"

braking. Manual braking may still be retained, but only for holding the instrument stationary. The braking moment at the end of the lowering should be twice that created by the weight of the load. Electric braking equipment with powder fillings need to be designed, which are lighter and cheaper than the synchronous machines. There is 1 graph and 3 Soviet references.

increase in the number of neutrophils in the peripheral blood, which developed at the expense of lymphocytes and eosinophils. A relative and an absolute neutrophilic leukocytosis with a slight displacement to the left was observed during the second delivery period (of maximal labor pains), whereby the erythrocytic sedimentation reaction (ESR) was considerably faster. During the third period (2 hours after delivery), the number of leukocytes in the peripheral blood decreased, and multi-nuclear neutrophils predominated. A relative and an absolute eosinopenia was observed during the second as well as during the third periods. A rela-

• TACS: magnetic core storage, computer memory

This Author's Certificate introduces a memory element which contains two windings, reading and winding. The unit contains a pre-amplifier, a detector, a discriminator, a counter, and a readout. The detector and discriminator are used to detect and reduce the noise level of the windings. The counter counts the windings and the readout displays the results. The unit is designed to be used in a laboratory setting.

ABSTRACT: A device is briefly described for increasing the efficiency of vacuum filling of several unit transformers with oil in the production of X-ray apparatus at the "Mosrentgen" plant. The most important part of the device is a valve which is automatically closed by a special float when the oil in each transformer attains the required level.
